

Acknowledgments

Thanks are due to Tim New, Brian Fletcher, Yaw-Long Yang and Huai-Sheng Fang for their contributions to this publication. This booklet provides a snapshot of worldwide birdwing conservation projects. We acknowledge recent work by Chris Mercer and the team from the Oro Conservation Project on the Queen Alexandra birdwing (*O. alexandrae*).

Support for the Richmond Birdwing (*Omithoptera richmondia*) Conservation Project was received from many individuals and agencies. We are most grateful to the World Wide Fund for Nature and National Heritage Trust for awarding a Threatened Species Community Grant, and to Bayer Australia for support of the 'Adopt-a-Caterpillar Scheme'. During the 2000 Sydney Olympics the Richmond Birdwing Conservation Project was selected for presentation to foreign media by Environment Australia.

Credit is due to the NSW National Parks & Wildlife Service, especially Bob Moffatt, who initiated the school activities and subsequently to the CSIRO's Double Helix Science Club for school and other educational activities; CSIRO Entomology and Rosie Schmedding, CSIRO Public Affairs; and The Hut Environment and Community Association Inc. hosted grants, workshops and other activities that concluded in 2000.

Much progress was due to the efforts of Scott Herd, Wes Vidler and staff of Balunyah Nurseries, Coraki, NSW, for cultivating butterfly food plants for distribution to nurseries and the community. Thank you to Queensland Parks and Wildlife Services, especially Paul Grimshaw and Estelle Ross; Heather Proctor, Griffith University for identifying the predatory mite; and Arthur Powder for records of natural enemies and other valuable information.
